To whom it may concern:

I have had the pleasure of knowing Miguel Conradi Gª-Baquero through his work in my laboratory, where he spent a six-month Erasmus training period for his master degree. The project was on the detection of 2D thin objects, with application to bio-medical imaging, and with a possible extension to 3D. He was very motivated with the potential application to cardiac imaging.

During his time in the lab, Miguel demonstrated the ability to work independently with great enthusiasm, and put in many long hours. We outlined a scope of work to be completed, and he successfully completed that work in the time required. The various discussions we had together were very productive and I found him very personable. Image analysis can be very frustrating at times, and Miguel imagined by himself a number of solutions to overcome the problems he was facing. Although the allotted timing of the training period has not permitted testing with 3D images, I am very satisfied with the results obtained by Miguel.

Overall, I would strongly recommend Miguel for a position in your organization.

Sincerely,

Laurent Najman
