

Volunteers wanted for a research study

Situational versus general patient traits in predicting readiness to pursue hearing treatment

This research will evaluate how people describe themselves and their behaviors in general situations and in situations related to their hearing loss. We will also try to identify traits that can predict their readiness to pursue treatment for hearing loss. Participants will complete this study remotely on their home computer or a smart-phone and it will take around two hours.

To participate you must:

- Be 18-85 years old
- Be fluent in English
- Have hearing problems
- Have no experience with hearing aids
- Own a device with internet access (smart-phone/tablet/computer)

Participants will receive \$30 compensation for participating in the study.

This research will be conducted under the direction of Dr. Jani Johnson, Director of the Hearing Aid Research Lab, University of Memphis.

For more information about this research contact Lipika Sarangi (lsarangi@Memphis.edu) or Jani Johnson (jajhns10@Memphis.edu).
