# DESIGNING AND DELIVERING

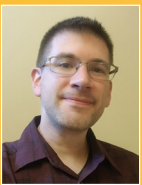

## Effective Scientific Presentations

This RAISN (Research Audiologist Information and Support Network) webinar is designed to support translational research skills for scientists, clinician-scientists, research assistants, and students.

Designing and delivering scientific presentations is a skillset that is rarely learned in a structured and intentional way. Delivering an effective presentation can be an invaluable opportunity to showcase findings in front of peers as well as receive meaningful feedback. Scientists at all career stages can benefit from practicing good techniques to communicate their work in a constructive and understandable way. This workshop is aimed at elevating awareness of good strategies for communicating science to other scientists, especially for conference podium presentations. The workshop will go into depth in generating good figures that effectively convey your key message, and handling questions. The workshop is open to scientists at all career stages, from trainees to senior scientists.

**Presenters:** Kelsey Anbuhl, Ph.D. and Matthew Winn, Au.D, Ph.D

**MATTHEW WINN** is an associate professor at the University of Minnesota in the Department of Speech-Language-Hearing Sciences, and a former clinical audiologist. He directs the Listen Lab, which is dedicated to studying speech communication and things that make it challenging for people with hearing loss.

**KELSEY ANBUHL** is a postdoctoral fellow in Dan Sanes' lab at New York University. Her goal is to address fundamental issues in sensory processing, especially in the context of hearing loss. Currently, she is exploring how hearing loss during adolescence impacts long-term auditory processing. Dr. Anbuhl strives to convey her science in an engaging and accessible way, and enjoys helping others do the same.
